Special considerations:

- 1) BOND ATTACHMENTS before aligners using the Template aligner provided if indicated.
- 2) Please place any buttons or elastics if indicated in the plan for complete correction of rotated teeth.
- 3) Please check for IPR if added for opening contacts and should be diligently carried out as indicated in the plan.
- 4) Kindly monitor the patient every 4-5th aligner stage.
- 5) In case of mid treatment ill fit aligner, kindly continue wearing the last best fitting aligner and provide us a new scan. Continue wearing the aligners till your next sets arrives.

Please Note:

- 1) Attachment given in two stage before aligner 1 and before aligner14 .
- 2) This is the best treatment plan in a single arch, for further correction required both arch.
- 3) Patient is advised to do flossing between the teeth regularly to keep the contacts passive.
- 4) (46) seems to be crown, we have given movements to it, kindly track the movements periodically and prosthesis may require replacement post aligner treatment.
- 5) We have done extraction of 48.
